DETAILED ACTION**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 9 recites the limitation, "a video camera arranged in the housing at a set distance away from one of an exit point of the light beam and the predetermined axis, the video camera having an optical axis and a positioning element operative to automatically **shift** the optical axis of the camera with respect to the least one light beam or with respect to the predetermined axis of the lamp housing until the optical axis of the camera intersects the illuminated field" in lines 5-9. However, the limitation should read "a video camera arranged in the housing at a set distance away from one of an exit point of the light beam and the predetermined axis, the video camera having an optical axis and a positioning element operative to automatically **shift** the optical axis of the camera with respect to the **at** least one light beam or with respect to the predetermined axis of the lamp housing until the optical axis of the camera intersects the illuminated field". The claim will be amended as understood by the examiner in order to simply correct a spelling mistake and replace the word "at", which was mistakenly omitted due to the amendment filed March 15, 2005.

Allowable Subject Matter

Claims 1-3, 5-9, and 12 are allowed.

The following is an examiner's statement of reasons for allowance:

As for claim 1, the prior art does not teach or fairly suggest the use of recording device having a camera mounted on a bracket with a light source mounted at a fixed distance from the camera, that adjusts the distance by first panning the camera across a range and then pivots the camera to the position of maximum brightness.

As for claim 9, the prior art does not teach or fairly suggest the use of a lamp having a camera mounted on a bracket with a light source mounted a fixed distance from the camera, and an angle sensor that generates driving signals, to control the orientation of the camera, based on the orientation of the optical axis in space and the orientation of the lamp housing, of the predetermined axis, or of the light beam.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
